Autumn & Winter Feeding

Stay ahead of the game for Spring

Winter Strength is necessary to get through the harsh realities of cold temperatures causing slow growth. The plants will still be using a small amount of nutrition which is stored in the roots. Agronomic Services has come up with spray plan to build and store carbohydrate reserves for continued strength until spring arrives.

- **Floradox Pro (5lts/ha)**

Floradox Pro raises and enhances plants defence mechanism, which prepares the plants against attack. Providing supplemental proteins to increase the immune system, and improve rooting.

- **Astron (Rooting) (5lts/ha) Per 4 Max (Density)**

Astron provides strength, cell division, and complexed zinc for reduced stress with essential micronutrients and patented biostimulants specifically designed to induce rooting. **Per 4 Max** is Astron's brother specifically designed to improve density, so you can use one or the other in winter.

- **Knife (5lts/ha)**

Knife has a new improved Iron formulation for immediate green up, encouraging healthy plant and strong root development, without nitrogen driven growth.

- **Renaissance (5lts/ha)**

Renaissance's patented phytochemicals and micronutrients for root initiation and growth, stress resistance, and colour.

Cost per application £335.00, all products are tank mixable
