Disease Prevention & Recovery

Prepare your plants for disease pressure

It's that time of year when diseases start to cause problems, in particular Fusarium & Dollar Spot. Due to physical worked carried out, top dressing, dew, humidity, increase in moisture around the crown area, potential snow and temperature fluctuation etc. Agronomic Services has come up with spray plan to protect the plants, and ensure the surface of the turf has plenty of oxygen for the beneficial bacteria, and not antagonistic.

- **Floradox Pro 10lts/ha**

Floradox Pro raises and enhances plants defence mechanism, which prepares the plants against attack. Providing supplemental proteins to increase the immune system.

- **P K Fight 10lts/ha**

Stabilised phosphite and potassium, providing energy, stress tolerance. with an increase in cellular strength the plants are more prepared to withstand disease pressure.

- **Oxy-Rush 10lts/ha**

Oxy-Rush generates oxygen for beneficial aerobic microbes. They in turn create a far better environment for the turf, plus they are antagonistic towards the various pathogens during this susceptible period.
