Spring Start & Disease Recovery

Rapidly Restoring Putting Surfaces

It's so important to get the putting surfaces, back to their former glory, yet the weather during the first months of the year is against us. To fill in disease scars, and aeration holes. Agronomic Services has come up with a recovery spray plan to restore the plants health, and strength at the start of spring for shaded areas. All products are tank mixable in 300li/ha sprayed onto the leaf.

- **Per 4 Max** (application rate 3li/ha)
A specifically designed biostimulant to increase density, and support chlorophyll production.
- **Carbon N** (application rate 7li/ha)
Three forms of nitrogen with proprietary technology to translocation nutrients, which is specifically formulated for foliar uptake.
- **Protesyn** (application rate 3li/ha)
Liquid sunshine. Protesyn provides Complete amino acids, simple, and complex carbohydrates / sugars, and vitamins to aid photosynthesis.
- **Knife** (application rate 7li/ha)
New improved Iron formulation for immediate green up, encouraging healthy plant and root development, without nitrogen driven growth.

Price per application, three to four weeks apart: £265.00
