

# LIQUID COLD STARTER

## KICK START YOUR GREENS

A cold wet start to the year greatly reduces plant growth & photosynthesis. Different grass varieties grow at varying rates, so surfaces are slow to get back to their former glory. The rootzones are too cold for granulars to be efficient, with low microbial activity. The Agronomic's Liquid Cold Starter will kick the grass into action. Liquid Cold Starter can be applied to wet grass with no irrigation required.

### **AGRONOMIC'S 18-18-18 Bio**

Is a highly concentrated NPK solution containing a unique package of all macro, secondary and micro nutrients. Root-zones often struggle to provide the necessary nutrition for the turf in Winter & Spring when the turfs ability to utilise the most important elements are limited. The combination of food in the product ensures enhanced rooting, reduced disease pressure and an increase in winter colour and strength. (application rate 10lts/ha)

### **AGRONOMIC'S IRON MAN-Fe+Seaweed 5-0-0+7%Fe**

Combines a powerful biostimulant with iron and nitrogen. It is used to enhance turf colour and hardiness, while increasing root development. The combined formulation of biostimulant, plus iron and nitrogen, creates a healthy sward which can be less susceptible to Fusarium. (application rate 30lts/ha)

Both products are tank mixable in 400lts/ha sprayed on the crown area.  
Three monthly applications, from February to April. £330.00 per application.

**AGRONOMIC'S**

## SPRING START & SUMMER FEEDING

### KEEP THE GREENS IN TOP CONDITION

**FLORATINE** **LARGO**

New improved Iron formulation with micronutrients for immediate green up, encouraging healthy plant and root development. (application rate 10lts/ha)

**FLORATINE** **ASTRON**

Is a specifically formulated bio-stimulant to increase cell division and rooting with proprietary technology to translocate nutrients for foliar uptake. (application rate 5lts/ha)

**FLORATINE** **PROTESYN**

Provides complete amino acids, proteins, carbohydrates, antioxidants, therefore improving the plants energy and photosynthetic process. (application rate 5lts/ha)

**FLORATINE** **CARBON TIGER 4-4-16**

the perfect balance of NPK, slow and fast release nitrogen, designed to provide the plant correct formulation. (application rate 10lts/ha)

**FLORATINE** **RAIDER PLUS**

Raider Plus is a unique spray adjuvant specifically designed to improve the up-take and absorption of any systemic/foliar applied liquid. (application rate 1.5lts/ha)

All products are tank mixable in 150-300lts/ha sprayed onto the leaf.  
Four applications, 2-3 weeks apart, from February onwards. Price per application £360.00
