

SOIL

MAXIPLIX

LIQUID SOIL CATALYST

Maxiplus is a concentrated liquid humic acid that can provide multiple benefits for problem soil conditions. The complexing action of *Maxiplus* can decrease nutrient tie-up and promote availability of nutrients otherwise unavailable for plant uptake.

- Increased Nutrient Availability
- Improved Microorganism Activity
- Increased Exchange Capacity
- Improved Water Availability
- Chelation of Micronutrients

Heavy clay soils develop compaction which leads to nutrient tie-up, uneven moisture availability, restricted root penetration, and insufficient oxygen.

High sand content soils are characterized by excessive nutrient and moisture leaching, low cationic exchange capacity, low organic activity, and localized formation of “hot spots” and algae.

Maxiplus's powerful cationic exchange capacity flocculates clay particles and conditions sand soils for assisting with these issues and other factors limiting the healthy functioning of soils.

DISTRIBUTED BY:

ACTIVE INGREDIENTS

Organic Matter (% on gross weight) 20,0%

Net Weight: 1,049 kg/L

Rate of Application: 10-20 litres per hectare in addition to the regular fertilizer program. If severe compaction is present, an initial application of 30-50 litres per hectare will be beneficial. Maximum benefit will be obtained when Maxiplus is used during aeration.
