# THATCH BUSTER

THATCH DECOMPOSITION AGENT

*Thatch Buster* is a concentrated cellulase enzyme product. Cellulase enzymes are contained in the secretions of microorganisms and are the substances which break down the major component of dead plant tissue. *Thatch Buster*:

- Accelerates Decomposition of Cellulose
- Decreases Incidence of Unhealthy Thatch Layering
- Promotes Conversion of Dead Clippings to Usable Nutrients

*Thatch Buster* is composed of naturally occurring cellulase enzyme components which are safe to use and non-polluting. The enzymes in *Thatch Buster* duplicate those in nature which break down cellulose residue of stems and leaves, leading to their conversion to nutrients.

## PROFESSIONAL USE GUIDELINES

5

**APPLICATION:** Apply 10 L/ha in the initial application. If the thatch layer to be removed is severe, make a follow up application of 5 L/ha 3 or 4 weeks after the first application. Best results will be realized when ambient air temperatures are greater than 21°C. Material should be watered in to the interface of soil and thatch.

**MIXING:** Where thatch is very dense, *Pervade* penetrant can be added to the tank mix to achieve penetration. Generally, *Thatch Buster* should be applied only with those products that can aid in the thatch reduction process.

Net Weight: 0,98 kg/L
