RETAIN PRO

RETENTION WETTING AGENT

Retain Pro is a leading edge wetting agent designed to assist turf managers in the effective management of soil moisture including:

- **Retention**
- **Uniform Distribution**
- **Hydrophobic Soils**

Retain Pro's proprietary formula promotes entry and even distribution of water into the rootzone. Its components then interact with soil molecules to reduce leaching.

All surfactants break the surface tension of water or "make water wetter." Beyond that property, surfactants are formulated to impart different characteristics to water in relation to its interaction with solids:

Spreading - Ability to break the water's surface tension for better coverage. Most effective in spray adjuvants to maximize coverage.

Dispersion, Adhesion - Ability to "hold" water and disperse it uniformly throughout the soil.
