

SPRING START & SUMMER FEEDING

KEEP THE GREENS IN TOP CONDITION

The cold wet start to the year greatly reduces plant growth. The various grasses grow at different rates, so surfaces are very slow to get back to their former glory. The rootzones are too cold for granular applications and microbial activity is slow. Agronomic Services have developed a Foliar Spray Plan to ensure the greens perform to their optimum all year.

ASTRON (application rate 5lts/ha)

Is a specifically formulated bio-stimulant to increase cell division and rooting with proprietary technology to translocate nutrients for foliar uptake.

PROTESYN (application rate 5lts/ha)

Provides complete amino acids, proteins, carbohydrates, antioxidants, therefore improving the plants energy and photosynthetic process.

KNIFE (application rate 5lts/ha)

New improved Iron formulation with micronutrients for immediate green up, encouraging healthy plant and root development.

RAIDER PLUS (application rate 1.5lts/ha)

Raider Plus is a unique spray adjuvant specifically designed to improve the up-take and absorption of any systemic/foliar applied liquid.

**All products are tank mixable in 150-300lts/ha sprayed onto the leaf.
Four applications, 2-3 weeks apart, from February onwards**
