TURF ACTION PLAN

[www.agronomics.co.uk](http://www.agronomics.co.uk)

## THATCH REDUCTION

Turf needs O<sub>2</sub>, CO<sub>2</sub>, H<sub>2</sub>O and nutrients, but excessive thatch build-up minimizes the availability of all these essential elements. Reducing all aspects of plant health and nutrient availability. Breaking down the thatch will unlock nutrients and increase the movement of air and water. Agronomic Services have developed a way to manage and reduce thatch. All products are tank mixable in 600-1000lts/ha sprayed onto the soil, and immediately watered into the thatch area.

### THATCH BUSTER

(application rate 10lts/ha)

Thatch Buster is a cellulose enzyme product designed to evenly accelerate the decomposition of cellulose.

### PERVADE

(application rate 2lts/ha)

Pervade is a specially designed wetting agent for penetrating tough thatch layers.

### OXY-RUSH

(application rate 20lts/ha)

Oxy-Rush generates oxygen for beneficial aerobic microbes. They in turn work alongside the decomposing enzymes. Create the environment to produce strong healthy disease resistant turf.

**Apply 3-4 times a year, 4-6 weeks apart through the growing season.**
