AUTUMN & WINTER FOLIAR FEEDING

Feeding your turf through winter is vital to ensure the grass stays healthy and strong. Agronomic Services have developed a Winter Foliar Spray Plan which builds and stores carbohydrate reserves, these products provide all the necessary nutrients the plants need until Spring. If you are mowing the turf it is growing so it needs food. All products are tank mixable together in low spray volume of 150-300lts/ha sprayed onto the leaf as a fine mist at any temperature above 4°C, which allows up to 90% product absorption.

PER 4 MAX

(application rate 5lts/ha)

Our patented biostimulant specifically designed to increase density and help drive roots, reducing stress during the winter and spring months.

LARGO

(application rate 5lts/ha)

New improved Iron and Nitrogen formulation specifically designed for foliar up-take, encouraging healthy plant and root development. With essential micronutrients and patented biostimulant.

CARBON K 3-0-15+Mg

(application rate 5lts/ha)

Carbon K with food grade potassium and Carbon Power technology for improved cold weather stress and carbohydrate translocation to the roots.

PROTESYN

(application rate 5lts/ha)

A liquid organic complex providing complete amino-acids, proteins, simple and complex carbohydrates, and essential turf vitamins to maximise the plant's ability to photosynthesise during low sun light months.

RAIDER PLUS

(application rate 1.5lts/ha)

Raider Plus will guarantee the above foliar spray plan will be absorbed quickly by the plants, the patented ingredients ensures rapid up-take and translocation through the plants.

Apply on a monthly basis throughout the Autumn and Winter
