BALL SPEED & TOURNAMENT PREPARATION

Tournaments can be very stressful on the greens, due to reduced cutting height, reduced aeration and rolling which increases plant stress dramatically. Agronomic Services, have designed a specific foliar spray plan to ensure the turf is as strong and healthy as possible with increased ball speed.

Apply the **FOLIAR** products in a tank mix of 150-350lts/ha sprayed onto the leaf.

ASTRON

(application rate 5lts/ha)

Is a specifically formulated bio-stimulant to increase cell division and rooting with proprietary technology to translocate nutrients for foliar uptake.

PERK-UP

(application rate 5lts/ha)

Is pure turf grass energy for respiration and stress relief, specifically designed to revitalize intensively managed turf.

TURGOR

(application rate 20lts/ha)

Superior cut, increased ball speed, improved wear tolerance and exceptional ball mark resistance.

RAIDER PLUS

(application rate 1.5lts/ha)

Raider Plus is a unique spray adjuvant specifically designed to improve the up-take and absorption of any systemic/foliar applied liquid.
