## **STOP ALGAE & ANAEROBIC CONDITIONS ON NATURAL & SYNTHETIC PITCHES**

**All sports pitches suffer from Algae & Black Layer at some stage!**

Agronomic Services Limited have developed a solution to help Groundsmen maintain the playing surface to a high standard, keeping Algae and Black Layer under control.

All products are tank mixable in 500lts/ha. sprayed onto the surface.

### **OXY-RUSH/OXYFLOR**

**(application rate 20lts/ha)**

Oxy-Rush generates oxygen for beneficial aerobic microbes. Creates a superior soil environment from anaerobic to aerobic. Removes Black Layer and reduces Thatch with increased nutrient up-take and efficiency.

### **BLACKOUT**

**(application rate 50lts/ha)**

Is a unique blend of enzymes that aggressively competes & breaks down surface algae. Effective in high & low temperature conditions. Performs in Aerobic & Anaerobic conditions.

### **PERVADE**

**(application rate 2lts/ha)**

Pervade is a specially designed product for penetrating the soil profile. If there is anywhere for the water to go, Pervade will increase the speed of percolation, allowing the water to move through the soil with increased speed, reducing stagnation

**Apply every 2-3 weeks**
