## COMPLETE ROOTZONE BOOSTER

Temperature, water, compaction, anaerobia, pH, organic matter, etc. all have the ability to reduce nutrient availability and therefore directly impact root strength and development. It is vital to ensure and help the aerobic (Oxygen using) microbes to be prolific, as they in turn improve the overall efficiency of the soil. Agronomic Services have developed a Spray Plan to support the microbial population which will greatly increase the efficiency of the rootzone. All products are tank mixable in 600-1000lts/ha sprayed onto the soil and immediately watered into the rootzone.

### **OXY-RUSH**

(application rate 20lts/ha)

Oxy-Rush generates oxygen for beneficial aerobic microbes. They in turn create a far better soil environment to produce strong rooting and healthy disease resistant turf. The combination of Oxy-Rush, Osiryl, Maxiplex and Trical 35SP will ensure the soils perform to their optimum.

### **OSIRYL**

(application rate 15lts/ha)

Osiryl root development stimulator, induces rapid rooting when plants are under stress. Increases resistance against nematode attack.

### **MAXIPLEX**

(application rate 10lts/ha)

Maxiplex is a highly concentrated 20% liquid Humic Acid, a carbon food source for microbes providing multiple benefits for all soil types and can be mixed with other soil applied liquids, e.g. Oxy-Rush and Osiryl.

### **TRICAL 35SP**

(application rate 6-20kg/ha)

Trical SP35 is the highest concentration of soluble calcium, it contains 35% calcium carbonate for immediate availability, strengthening the whole plant.

**Four to six applications throughout the year will ensure the rootzones perform to their optimum.**
