HEAT STRESS & SUMMER ROOTING

OVERCOMING HIGH TEMPERATURE

When summer arrives it often takes us by surprise, heat stress, dry patch, not enough rain. Plants start to wilt, they are trying to run a marathon in hot weather without a sports drink to keep them going, this is what your turf is doing. Agronomic Services have developed a Recovery Spray Plan to help the plants stay strong and full of energy through the summer months. All products are tank mixable in 300lts/ha sprayed onto the leaf.

PERK UP

(application rate 5lts/ha)

Is pure turfgrass energy for respiration and stress relief, specifically designed to revitalize intensively managed turf.

CARBON K

(application rate 10lts/ha)

Heat and wear tolerance from highly available potassium with proprietary Carbon Power for easy translocation.

RENAISSANCE

(application rate 5lts/ha)

A full range of micronutrients, antioxidants, and phytochemicals designed to reduce stress, increase rooting and colour.

2-3 applications tank mixable, 7-10 days apart
